If significant pain persists, laparoscopy may become necessary. These repairs, however, limit their focus to the upper aspect of the myopectineal orifice and neglect the lower aspect.

Clinical and laboratory evaluation of an electrosurgically laparoscopic trocar. Why thus get at our page? The majority of surgeons will simply repair the injury and repair the hernia by a laparotomy and primary closure. A few complications, such as an unrecognized enterotomy, can have a significant mortality rate. The major differences between the meshes are the size of the monofilaments used.
