While it is clear that memory decline in MCI is highly likely and would lead to the more severe diagnosis of Alzheimer's disease, it is a debate if TLE is a dementing disease or not. The special role of the enthorinal cortex is further supported by a study which revealed that best classification accuracy of MCI was based on enthorinal cortex volume and best classification accuracy of Alzheimer's disease was based on hippocampal volume Pennanen et al. Deep brain stimulation for enhancement of learning and memory.

Each year, our team sees more than 2, children with pediatric epilepsy in our In the Adult Section of our Epilepsy Center, we have dedicated neuropsychologists who specialize in testing for adults with epilepsy. Rolls ET.

How should the first conversation about having epilepsy be carried? There are mainly 2 options: 1 - Your institution handles itself the process of account creation login and password : Please contact your librarian who will provide you with your access codes.
